

## *Active Air owners explain improved ride comfort*

### **Maneuvering in parking lots and campgrounds**

*When we parked for the night we just activated the Air Leveling System. We were level almost instantly and in the morning we were on our way in no time."*

Al and Rita Jirsa

### **Rocking from wind and rough roads**

*"Your system improved my handling on curves and in wind considerably."*

Ed and Judy

*"In high winds the RV handled like there was just a breeze. It also cornered without leaning over."*

Al and Rita

*"The added capability of being able to lower the coach closer to the road is a real benefit too. It's amazing how much it helps in strong crosswinds"*

Steve Housley

### **Aids people and pets susceptible to motion sickness**

*"Our birds thank you, too, as they enjoy the new, smoother ride."*

Al & Rita Jirsa

*"I'm not tired after riding all day. Since the coach doesn't rock side to side on uneven surfaces or on curves, I can relax."*

Sharin Housley

### **Fast lane changes**

*"On two lane highways most of the way, encountering many, many oncoming trucks (and passing ones as well) along with very strong side winds. Prior to Active Air installation, the ride was very tiring, requiring constant two-handed steering with continuous correction. "With Active Air, driving was simply a pleasure - even better than we had expected,*

Tori and Jim Kelso

### **Entering main highways from secondary roads**

*"Entering a cloverleaf off-ramp as fast as I dared proved the system was all HWH promised. Sharp curves go by without much thought, like driving a nice automobile."*

Steve Housley

### **Clearing bumps or tree branches**

*Where the highway was rough we raised the unit and the bumps were less jarring. The rest of our trip across the US was just as enjoyable."*

Al and Rita Jirsa

*HWH engineers have even programmed options to lower or raise the coach on either side, in the front, or all together. It helps to lift the coach when we're traveling on a really bad section of highway with potholes, bad bridge deck approaches, or those broken pavement joints on a poor section of Interstate."*

Steve Housley
