

LIGHTED RESET SWITCH INSTALLATION

1. Locate area where switch will be installed.
2. Drill a 5/8" hole.
3. Separate the switch assembly by applying pressure to the release tabs located to each side of the word push, then pull the switch assembly away from the remaining components.
4. Remove the retainer nut and retainer washer.
5. Slide the light housing into the 5/8" hole.
6. Replace the retainer washer with the bent corners towards the mounting surface. The light housing and the retainer washer both have flat surfaces on either side, be sure to align these during installation.
7. Replace the retainer nut. Tighten to finger tight.
8. Visually line up the quarter crescent locators in the light housing and the switch assembly (Figure 1). Push the switch assembly against the light housing until latched into place. Pull on the switch assembly gently to be sure it is secure.
9. Wire the switch assembly as shown (Figure 2).
